

# 50 YEARS OF DISCOVERY

*in action*

## Transforming the World

For 50 years, Battelle staff working at the Department of Energy's Pacific Northwest National Laboratory in Richland have pushed the boundaries of science. We've moved technologies to market and reshape the way we work and live.

PNNL's scientific discoveries and innovations have led to more fuel-efficient cars. Safer airports and borders. An electric power grid that is more reliable and efficient. And much more – all part of an effort to make our nation more secure and prosperous.

Over the same half century, Battelle has been active in southeast Washington, investing heavily in civic, health and human services projects, the arts and most of all – in education. Battelle nurtures elementary, secondary and postsecondary school programs that emphasize science, technology, engineering and mathematics. We engage in innovative education collaborations such as Delta High School, the Hanford Reach Interpretive Center, Leadership and Assistance for Science Education Reform (LASER) and Mathematics, Engineering and Science Achievement (MESA).
